

Forensic Analysis Report

Report Date	2025-11-24T13:19:17.906055
Log File	raw_logs.txt
Analysis ID	08e1f76b
Generated On	2025-11-24 14:12

Executive Summary

This log file contains a mix of system, application, and network events from various systems over the course of several days. The most critical incidents include a binary checksum mismatch on MySQL server web-01, an unauthorized file access attempt detected on storage-03, and multiple failed login attempts on proxy-01. Additionally, there are several instances of unexpected disconnects, high number of login attempts, and authentication failures. The log also contains some errors related to iptables and DNS queries. Recommendation: Further investigation is needed to determine the root cause of these incidents and implement appropriate security measures.

Key Metrics

Metric	Value
Total Events Analyzed	100
Total Incidents Detected	7
Critical	0
High	0
Medium	7
Low	0
Indicators of Compromise	6

Findings (Detected Incidents)

[Medium] Binary checksum mismatch (Confidence: 80%)

Security incident detected

[Medium] Unauthorized file access attempt (Confidence: 80%)

Security incident detected

[Medium] Multiple failed login attempts (Confidence: 80%)

Security incident detected

[Medium] Unexpected disconnects (Confidence: 80%)

Security incident detected

[Medium] Authentication failures (Confidence: 80%)

Security incident detected

[Medium] DNS query errors (Confidence: 80%)

Security incident detected

[Medium] Iptables errors (Confidence: 80%)

Security incident detected

Indicators of Compromise (IOCs)

Type	Indicator	Severity
IP address	10.0.5.29	High
IP address	10.0.2.46	High
IP address	10.0.5.26	High
IP address	10.0.4.47	High
IP address	203.0.1.22	High
IP address	203.0.1.8	High

Recommendations & Mitigation Strategies

Priority 1: Investigate the root cause of the binary checksum mismatch on MySQL server web-01 and implement appropriate security measures.

Priority 2: Implement access controls to prevent unauthorized file access attempts on storage-03.

Priority 3: Investigate the high number of login attempts observed on proxy-01 and implement appropriate security measures.

Priority 4: Investigate the multiple failed login attempts detected on various systems and implement appropriate security measures.

Priority 5: Investigate the unexpected disconnects detected on various systems and implement appropriate security measures.

Priority 6: Investigate the authentication failures detected on various systems and implement appropriate security measures.

Priority 7: Investigate the DNS query errors detected on various systems and implement appropriate security measures.

Priority 8: Investigate the iptables errors detected on various systems and implement appropriate security measures.

Analysis Summary Stats

Analysis Statistics:

Detected 7 incidents: 0 Critical, 0 High severity

Analysis Duration: 0 seconds

File Size: 8.32 KB

Total Lines Analyzed: 100
