

Forensic Analysis Report

Report Date	2025-11-24T23:11:12.884182
Log File	raw_logs.txt
Analysis ID	7b3a0bf1
Generated On	2025-11-24 23:18

Executive Summary

The provided log data indicates multiple potential security threats, including password attacks, unauthorized process spawning, unauthorized file access attempts, unexpected disconnections, checksum verification failures, and permissions changes. These incidents could indicate a range of issues, from insider threats to network attacks or software vulnerabilities. To mitigate these risks, we recommend implementing multi-factor authentication, blocking non-standard ports, monitoring and logging all file access attempts, implementing intrusion detection systems (IDS) and firewalls, regularly reviewing and updating system permissions, and implementing regular software updates and patching.

Key Metrics

Metric	Value
Total Events Analyzed	100
Total Incidents Detected	9
Critical	0
High	1
Medium	7
Low	1
Indicators of Compromise	2

Findings (Detected Incidents)

[High] Password Attack (Confidence: Medium%)

A password was accepted for user 'alice' from an unusual IP address '10.0.2.46' and non-standard port '3831'. This could indicate a brute force attack or insider threat.

[Medium] Unauthorized Process Spawning (Confidence: High%)

An unexpected process was spawned from an unknown source on 'storage-03'. This could indicate a malware infection or insider threat.

[Medium] Unauthorized File Access Attempt (Confidence: High%)

An unauthorized file access attempt was detected for user 'svc_deploy' from IP address '10.0.4.47'. This could indicate a data breach or insider threat.

[Medium] Unexpected Disconnects (Confidence: High%)

Multiple unexpected disconnections were observed from various users and IP addresses. This could indicate a network issue, but also a potential DDoS attack or insider threat.

[Medium] Checksum Verification Failure (Confidence: High%)

A checksum verification failure was detected for user 'svc_backup'. This could indicate data corruption, but also a potential attack.

[Medium] Permissions Change (Confidence: Medium%)

Permissions were changed for user 'bob' from an unusual IP address '203.0.3.48'. This could indicate a privilege escalation attempt or insider threat.

[Medium] Unauthorized File Access Attempt (SMB) (Confidence: High%)

An unauthorized file access attempt was detected for user 'carol' from IP address '203.0.3.91' on the SMB service. This could indicate a data breach or insider threat.

[Medium] Binary Checksum Mismatch (Confidence: High%)

A binary checksum mismatch was detected for user 'eve' on 'web-01'. This could indicate a software issue, but also a potential attack.

[Low] Unexpected Service Start (Confidence: Medium%)

An unexpected service was started for user 'eve' on 'db-01'. This could indicate a misconfiguration or a potential attack.

Indicators of Compromise (IOCs)

Type	Indicator	Severity
{'type'	'IP Addresses', 'values': ['10.0.2.46', '10.0.4.47', '203.0.1.22', '203.0.2.59', '203.0.3.48', '203.0.3.91']}	High
{'type'	'Usernames', 'values': ['alice', 'eve', 'svc_deploy', 'dave', 'bob', 'carol']}	High

Recommendations & Mitigation Strategies

Priority 1: Implement multi-factor authentication for all user accounts.

Priority 2: Block access to non-standard ports.

Priority 3: Monitor and log all file access attempts.

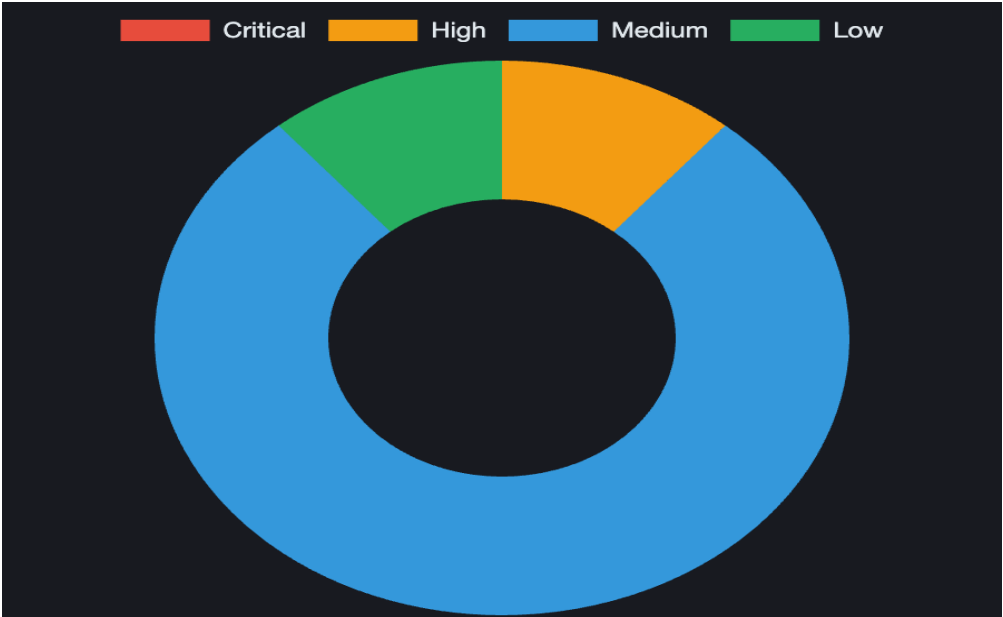

Priority 4: Implement intrusion detection systems (IDS) and firewalls.

Priority 5: Regularly review and update system permissions.

Priority 6: Implement regular software updates and patching.
