

Forensic Analysis Report

Report Date	2025-11-24T15:17:24.641242
Log File	test_security.log
Analysis ID	a8b0b921
Generated On	2025-11-24 15:17

Executive Summary

The log file reveals several security incidents, including the execution of suspicious processes, anomalous network activity, multiple failed login attempts, malicious domain access, and SQL injection attempts. The identified indicators of compromise (IOCs) include specific IP addresses and domains. Recommendations for mitigation include implementing multi-factor authentication, blocking access to known malicious IP addresses and domains, regularly patching and updating software, and enabling logging and monitoring.

Key Metrics

Metric	Value
Total Events Analyzed	33
Total Incidents Detected	6
Critical	0
High	0
Medium	0
Low	0
Indicators of Compromise	2

Findings (Detected Incidents)

[High] Suspicious Processes (Confidence: Medium%)

The log file indicates the execution of known malicious processes, such as mimikatz.exe and nc.exe.

[Medium] Network Activity (Confidence: High%)

Anomalous network activity includes connections to known malicious IP addresses and domains, such as a Tor exit node and suspected phishing sites.

[Medium] Authentication Events (Confidence: High%)

Multiple failed login attempts from an external IP address suggest a brute-force attack against various user accounts.

[Critical] Malicious Domains (Confidence: High%)

The log file reveals HTTP requests and DNS queries to known malicious domains, including ransomware command-and-control servers.

[Critical] SQL Injection Attempts (Confidence: High%)

The log file contains evidence of multiple SQL injection attempts against a web application, which could lead to unauthorized access or data exfiltration.

[Medium] File System Events (Confidence: High%)

The creation and suspicious file access of files in the Windows Temp folder and a Linux directory require further investigation.

Indicators of Compromise (IOCs)

Type	Indicator	Severity
Unknown	['192.168.1.100', '192.168.1.101', '185.220.101.45', '203.0.113.45']	High
Unknown	['evil-phishing-site.com', 'banking-phish.com', 'malware-downloader.xyz', 'ransomware-c2.evil.com']	High

Recommendations & Mitigation Strategies

Priority 1: Implement multi-factor authentication for all user accounts.

Priority 2: Block access to known malicious IP addresses and domains.

Priority 3: Regularly patch and update software, including web applications.

Priority 4: Enable logging and monitoring of network traffic and file system activity.

Analysis Summary Stats

Analysis Statistics:

Detected 6 incidents: 0 Critical, 0 High severity

Analysis Duration: 0 seconds

File Size: 1.97 KB

Total Lines Analyzed: 33
